PROFESSIONAL SUMMARY

Entry-level Data Analyst with hands-on experience in SQL, Python, Tableau, and Excel, currently interning at Codveda Technologies. Demonstrated ability to clean and analyze large datasets, build interactive dashboards, and translate complex data into actionable business insights. Proven track record in simulated enterprise environments at Deloitte and Commonwealth Bank, with a 15% retention improvement and 40% reduction in report generation time. Seeking a full-time Data Analyst role in tech or finance.

CORE SKILLS

Data Analysis	Exploratory Data Analysis (EDA), Statistical Analysis, Data Cleaning, Data Wrangling
SQL	SQL, Advanced Queries, Window Functions, Subqueries, DBMS
Excel	Pivot Tables, VLOOKUP, Power Query, Dashboards, Data Validation
Tableau	Dashboard Design, Parameter-Driven Interactivity, Market Basket Analysis
Python / R	pandas, scikit-learn, ggplot2, dplyr, web scraping, REST APIs
Other Tools	Power BI, Looker, Snowflake, Git & Version Control, AWS (Concepts), Supervised ML

PROFESSIONAL EXPERIENCE

Data Analyst Intern | Codveda Technologies

Mar 2026 – Present • Remote

- Contributing to data analysis and reporting tasks in a live production environment using SQL and Python.
- Assisting in building and maintaining dashboards to track business KPIs for internal stakeholders.
- Collaborating with the data team remotely, applying data cleaning and wrangling techniques on real datasets.

Data Specialist | Deloitte Australia (Forage Virtual Program)

Aug 2025 – Dec 2025

- Analyzed complex datasets for a telecommunications client, identifying trends that led to a 15% improvement in customer retention strategies.
- Created interactive Power BI dashboards to visualize KPIs, enabling stakeholders to make data-driven decisions.
- Performed advanced data cleaning and preprocessing on 500K+ records using Python and R, improving data quality by 30%.
- Developed SQL queries to extract insights from relational databases, reducing report generation time by 40%.

Data Science Specialist | Commonwealth Bank (Forage Virtual Program)

Sep 2025 – Dec 2025

- Built predictive models using Python (scikit-learn) to forecast customer behavior with 85% accuracy.
- Conducted exploratory data analysis (EDA) on financial datasets, uncovering patterns that informed business strategies.
- Implemented data preprocessing pipelines including feature engineering, normalization, and handling missing values.
- Presented findings to simulated stakeholders using Tableau visualizations and statistical reports.

KEY PROJECTS

Thesis: Retail Purchasing Behavior in Men's Consumer Electronics — *Python / ML* [Thesis Project](#)

- Built a behaviour aware ML model to predict purchase intent in men's electronics retail, integrating dwell time, shopper movement, and in-store interaction patterns as key predictive features.
- Identified that behavioural indicators (dwell time, movement flow, product interaction frequency) were stronger predictors of purchase intent than traditional demographic variables.
- Results demonstrated that data-driven retail strategies informed by predictive analytics outperform traditional intuition-based planning in product placement and cross-selling decisions.
- Proposed an ethical AI deployment framework for responsible use of behavioural analytics in retail environments, addressing privacy and consent considerations.
- Findings translated into actionable recommendations for store layout optimisation, cross-sell pairing, and targeted promotions.

Town Recommendation System (UK) - R

[Town Recommendation System \(UK\)](#)

- Problem: International investors lacked a data-driven tool to compare towns in Devon and Dorset across safety, affordability, broadband, and school quality for property investment decisions
- Process & Solution: Cleaned and integrated 5+ UK government datasets (house prices, crime, broadband, school scores) using R, built a weighted scoring algorithm with percent-rank normalization, and ranked 70+ towns identifying Colyton (Devon) as the top recommendation with an OverallScore of 0.92
- Hypothesis Tested: Investigated whether broadband speed, drug offense rates, and school Attainment 8 scores significantly influenced house prices across Devon and Dorset using linear regression models
- Hypothesis False: All 5 linear models returned statistically insignificant results ($p > 0.05$, $R^2 < 0.05$), proving no meaningful linear relationship exists between these variables and house prices — concluding that property values in these regions are driven by other unmeasured factors such as location desirability and proximity to amenities

Job Market Analysis Dashboard : *Tableau • Jan 2026*

[Tableau Job Analysis](#)

- Built a Tableau dashboard analyzing job posting trends, top-paying industries, and in-demand skills from a large dataset.
- Identified actionable insights on skill demand, salary distribution, and hiring patterns across sectors.

Market Basket Analysis : Munchys Pet Supply

[Tableau Market Basket Analysis](#)

- Built an executive Tableau dashboard across 1,553,910 in total sales, revealing a 27.50% profit margin and a shipping baseline cost of 385,150 , a material 25% of revenue.
- Identified Electronics (pet cameras) as the highest-margin category despite lower volume; Pet Food and Disposables drove the highest sales concentration.
- Discovered a high-strength cross-sell pairing (correlation = 0.9) between UltraSound Dog Barking Deterrent and Taste of the Wild High Prairie Food, supporting a targeted bundle promotion strategy.
- Shipping what-if scenario analysis revealed potential savings of 58,113 (from 385,150 to 327,037) through packaging optimization of the top 3 products, which account for 33% of total shipping costs.
- Found Texas delivered the highest customer lifetime value among top states (CA, FL, TX); geographic demand concentration supports evaluating an East Coast distribution strategy.

Customer Churn Rate Analysis : *Python / SQL • Oct 2025*

[Tableau Customer Churn Rate Analysis](#)

- Analyzed a dataset of 6,687 customers and identified an overall churn rate of 26.86% — approximately 1 in 4 customers leaving.
- Discovered California as a critical at-risk region with a 75% churn rate among international plan users, flagging it as a priority for targeted retention intervention.
- Found that competitive offers were the leading churn driver not service quality indicating the need for proactive competitive pricing strategies.
- Identified older customers (aged 69–88) as the highest-churning demographic, an underserved segment overlooked in most standard retention strategies.

Heart Disease Prediction : *Python / Machine Learning • Jul 2025*

[GitHub : Heart Disease Prediction](#)

- Applied supervised ML models (logistic regression, random forest) to predict heart disease risk, achieving strong AUC scores across cross-validated test sets.

Fandango Movie Rating Analysis : R • Jan 2025

[Rpubs Movie Rating Analysis](#)

- Investigated rating discrepancies on Fandango's platform (2015–2016) using R; published findings on RPubS.

EDUCATION

BSc (Hons) Computing

Coventry University • Graduated March 2026 • Data Science & Analytics Focus

- Final-year projects: Town Recommendation System (R) and Retail Purchasing Behavior Research (Python/ML).

CERTIFICATIONS

- Associate Data Analyst Certified - [DataCamp](#)(Mar 2026)
- Data Analyst in Tableau - [DataCamp](#)(Oct 2025)
- Data Analyst in Python - [FreeCodeCamp](#) (Feb 2024)
- Tableau Case Studies - DataCamp (Mar 2026)
- Data Literacy Certified - [DataCamp](#) (Dec 2015)
- Data Analysis in Excel - [DataCamp](#)(Mar 2026)
- SQL Skills for Data Analysis - [Dataquest.io](#) (Mar 2025)
- Introduction to Supervised ML in Python - [Dataquest.io](#) (Jul 2025)
